Chapter 1

Todo List

Member Choice_solution::Choice_solution (Parameters &)

Exceptions should be treated.

Chapter 2

Hierarchical Index

2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

- Choice_solution . . . 15
- Parameters . . . 32
- Solution . . . 38
  - Bedload . . . 9
  - Bump . . . 11
  - Dam_break . . . 16
  - Dressler_dam . . . 17
  - Inclined_plane . . . 20
  - MacDonald_like . . . 23
  - MacDonald_like_diffus . . . 25
  - MacDonaldB1 . . . 27
  - MacDonaldB2 . . . 30
  - Sampson . . . 35
  - Selfsimilar_dam_break . . . 37
  - Swash . . . 43
  - Thacker . . . 47
  - Thacker2D . . . 48
- Swash_solution . . . 46

Chapter 3

Class Index

3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

Bedload
: Computes solutions with bedload . . . 9

Bump
: Computes bump solutions . . . 11

Choice_solution
: Choice of the solution . . . 15

Dam_break
: Computes dam break solutions . . . 16

Dressler_dam
: Computes Dressler dam break solution . . . 17

Inclined_plane
: Computes the solutions over an inclined plane . . . 20

MacDonald_like
: Computes Mac Donald solutions . . . 23

MacDonald_like_diffus
: Computes Mac Donald solutions with diffusion . . . 25

MacDonaldB1
: Computes Mac Donald pseudo 2d solutions . . . 27

MacDonaldB2
: Computes Mac Donald pseudo 2d solutions . . . 30

Parameters
: Gets parameters . . . 32

Sampson
: Computes Sampson solution . . . 35

Selfsimilar_dam_break
: Computes self-similar dam break solutions . . . 37

Solution
: Analytic solution . . . 38

Swash . . . 43

Swash_solution
: Computes the solutions of the swash over an inclined plane . . . 46

Thacker
: Computes Thacker solution . . . 47

Thacker2D
: Computes Thacker solutions in 2D . . . 48

Chapter 4

File Index

4.1 File List

Here is a list of all files with brief descriptions:

Headers/bedload.hpp
Computes solutions with bedload . . . 51
Headers/bump.hpp
Computes bumps solutions . . . 52
Headers/choice_solution.hpp
Choice of the solution . . . 52
Headers/dam_break.hpp
Computes dam break solutions . . . 54
Headers/dressler_dam.hpp
Computes Dressler dam break solution . . . 54
Headers/inclined_plane.hpp
Computes the solution over an inclined plane . . . 55
Headers/macdonald_like.hpp
Computes Mac Donald solutions . . . 56

Sources/thacker.cpp
Computes Thacker solution . . . 72
Sources/thacker2d.cpp
Computes Thacker solution in 2D . . . 73

Chapter 5

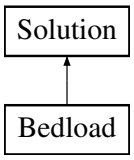
Class Documentation

5.1 Bedload Class Reference

Computes solutions with bedload.

`#include <bedload.hpp>`

Inheritance diagram for Bedload:



Public Member Functions

- Bedload (Parameters &)

  Constructor.
- virtual ~Bedload ()

  Destructor.
- void compute ()

  Computes the solution.
- void param (SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR) const

  Writes the parameters of the solution.
- void paramwarning () const

  Writes a warning about the the solution.

Additional Inherited Members

5.1.1 Detailed Description

Computes solutions with bedload.

Class that computes the solutions where the bed is moving with bedload, see Berthon et al. [2012].

Definition at line 70 of file bedload.hpp.

5.1.2 Constructor & Destructor Documentation

Bedload::Bedload (Parameters & *par*)

Constructor.

Defines the physical parameters, the final time and prints the header with the configuration.

Parameters

in	*par*	contains all the values from the parameters

Warning

Problem: allocation of z0 failed

Modifies

Solution::dx_ex, Solution::L, Solution::T, Solution::xex.

Note

If the vector z0 cannot be allocated, the code will exit with failure termination code.

Definition at line 59 of file bedload.cpp.

Bedload::~Bedload ( ) [virtual]

Destructor.
Definition at line 149 of file bedload.cpp.

5.1.3 Member Function Documentation

void Bedload::compute ( ) [virtual]

Computes the solution.
Computes the chosen bedload solution, see Berthon et al. [2012].

Modifies

Solution::hex, Solution::uex, Solution::zex.

Implements Solution.
Definition at line 154 of file bedload.cpp.

void Bedload::param (SCALAR *L,* SCALAR *dx_ex,* SCALAR *T,* SCALAR *uexl,* SCALAR *hexl,* SCALAR *z0l,* SCALAR *zexl,* SCALAR *uexr,* SCALAR *hexr,* SCALAR *z0r,* SCALAR *zexr,* SCALAR *alpha,* SCALAR *beta,* SCALAR *A,* SCALAR *q,* SCALAR *C,* SCALAR *p*) const

Writes the parameters of the solution.
Parameters

in	*L*	length of the domain
in	*dx_ex*	space step
in	*T*	final time
in	*uexl*	value of the velocity on the left boundary
in	*hexl*	value of the water height on the left boundary
in	*z0l*	value of the inital topography on the left boundary
in	*zexl*	value of the final topography on the left boundary
in	*uexr*	value of the velocity on the right boundary

in	*hexr*	value of the water height on the right boundary
in	*z0r*	value of the inital topography on the right boundary
in	*zexr*	value of the final topography on the right boundary
in	*alpha*	parameter for Exner equation
in	*beta*	parameter for Exner equation
in	*A*	parameter for Exner equation
in	*q*	parameter for Exner equation
in	*C*	parameter for Exner equation
in	*p*	parameter for Exner equation

Definition at line 174 of file bedload.cpp.

void Bedload::paramwarning ( ) const

Writes a warning about the the solution.

Warning

WARNING: to compare your numerical result to this solution, you must be able to remove friction from the Shallow-Water part (see doc).

Definition at line 212 of file bedload.cpp.
The documentation for this class was generated from the following files:

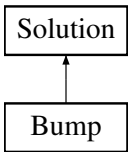
- Headers/bedload.hpp
- Sources/bedload.cpp

5.2 Bump Class Reference

Computes bump solutions.

`#include <bump.hpp>`

Inheritance diagram for Bump:



Public Member Functions

- Bump (Parameters &)

  Constructor.
- virtual ~Bump ()

  Destructor.
- void compute ()

  Computes the solution.
- SCALAR p (SCALAR, SCALAR, SCALAR) const

  Coefficient p for Cardano method.
- SCALAR q (SCALAR, SCALAR, SCALAR, SCALAR) const

  Coefficient q for Cardano method.
- SCALAR determinant (SCALAR, SCALAR) const

  Determinant for Cardano method.

- SCALAR height (SCALAR, SCALAR, SCALAR, SCALAR, SCALAR) const

  Computation of the 3rd order polynomia roots.
- void abcd (SCALAR, SCALAR, SCALAR, SCALAR, SCALAR &, SCALAR &, SCALAR &, SCALAR &)

  Defines a, b, c, d in order to solve ah^3+bh^2+ch+d.
- SCALAR RHJump (SCALAR, SCALAR, SCALAR) const

  Steady state RH relation.
- void param (SCALAR, SCALAR) const

  Writes the parameters of the solution.

Additional Inherited Members

5.2.1 Detailed Description

Computes bump solutions.

Class that computes the solutions with a bump for the topography, see Delestre et al. [2013] and Goutal and Maurel [1997].

Definition at line 71 of file bump.hpp.

5.2.2 Constructor & Destructor Documentation

Bump::Bump (Parameters & *par*)

Constructor.

Defines the physical parameters and prints the header with the configuration.
The solution is saved at the steady state.

Parameters

in	*par*	contains all the values from the parameters

Modifies

Solution::dx_ex, Solution::L, Solution::xex, Solution::zex to have the bump configuration.

Definition at line 60 of file bump.cpp.

Bump::~Bump ( ) [virtual]

Destructor.

Definition at line 166 of file bump.cpp.

5.2.3 Member Function Documentation

void Bump::abcd (SCALAR *q_in*, SCALAR *h_out*, SCALAR *zbx*, SCALAR *zbfin*, SCALAR & *a*, SCALAR & *b*, SCALAR & *c*, SCALAR & *d*)

Defines a, b, c, d in order to solve ah^3+bh^2+ch+d.

Enters the coefficients of the 3rd order polynomia we want to solve: ah^3+bh^2+ch+d.

Parameters

in	*q_in*	inflow discharge
in	*h_out*	water height at the outflow

in	*zbx*	bottom topography of the current cell
in	*zbfin*	bottom topography at the outflow
out	*a*	coefficient of the 3rd order polynomia
out	*b*	coefficient of the 3rd order polynomia
out	*c*	coefficient of the 3rd order polynomia
out	*d*	coefficient of the 3rd order polynomia

Definition at line 363 of file bump.cpp.

void Bump::compute ( ) [virtual]

Computes the solution.

Computes the chosen bump solution, see Delestre et al. [2013] and Goutal and Maurel [1997].

Modifies

Solution::hex.

Implements Solution.

Definition at line 169 of file bump.cpp.

SCALAR Bump::determinant (SCALAR *p*, SCALAR *q*) const

Determinant for Cardano method.

Determinant in the Cardano method/related to number of roots.

Parameters

in	*p*	computed by Bump::p
in	*q*	computed by Bump::q

Returns

Value of $q^2 + \frac{4}{27}p^3$.

Definition at line 289 of file bump.cpp.

SCALAR Bump::height (SCALAR *p*, SCALAR *q*, SCALAR *a*, SCALAR *b*, SCALAR *hnear*) const

Computation of the 3rd order polynomia roots.

Parameters

in	*p*	computed by Bump::p
in	*q*	computed by Bump::q
in	*a*	coefficient of the 3rd order polynomia
in	*b*	coefficient of the 3rd order polynomia
in	*hnear*	height of the previous or following cell (depending on the height computation direction)

Warning

Error: no positive height.
Error: Probably irregular solution.

Returns

h, the water height.

Definition at line 303 of file bump.cpp.

SCALAR Bump::p (SCALAR *a*, SCALAR *b*, SCALAR *c*) const

Coefficient p for Cardano method.

Parameters

in	*a*	coefficient of the 3rd order polynomia
in	*b*	coefficient of the 3rd order polynomia
in	*c*	coefficient of the 3rd order polynomia

Returns

Value of $-\frac{b^2}{3a^2}+\frac{c}{a}$.

Definition at line 260 of file bump.cpp.

void Bump::param (SCALAR *L*, SCALAR *dx_ex*) const

Writes the parameters of the solution.

Parameters

in	*L*	length of the domain
in	*dx_ex*	space step

Definition at line 399 of file bump.cpp.

SCALAR Bump::q (SCALAR *a*, SCALAR *b*, SCALAR *c*, SCALAR *d*) const

Coefficient q for Cardano method.

Parameters

in	*a*	coefficient of the 3rd order polynomia
in	*b*	coefficient of the 3rd order polynomia
in	*c*	coefficient of the 3rd order polynomia
in	*d*	coefficient of the 3rd order polynomia

Returns

Value of $\frac{b}{27a}\left(\frac{2b^2}{a^2}-9\frac{c}{a}\right)$.

Definition at line 273 of file bump.cpp.

SCALAR Bump::RHJump (SCALAR *hplus*, SCALAR *hminus*, SCALAR *q*) const

Steady state RH relation.

Parameters

in	*hplus*	water height on the right side
in	*hminus*	water height on the left side
in	*q*	discharge

Returns

Value of $\left|q^2\left(\frac{1}{hplus}-\frac{1}{hminus}\right)+\frac{g}{2}\left(hplus^2-hminus^2\right)\right|$.

Definition at line 385 of file bump.cpp.

The documentation for this class was generated from the following files:

- Headers/bump.hpp
- Sources/bump.cpp

5.3 Choice_solution Class Reference

Choice of the solution.

`#include <choice_solution.hpp>`

Public Member Functions

- Choice_solution (Parameters &)
  Constructor.
- void compute ()
  Computes the solution.
- virtual ~Choice_solution ()
  Destructor.

5.3.1 Detailed Description

Choice of the solution.

Class that calls the chosen solution.

Definition at line 130 of file choice_solution.hpp.

5.3.2 Constructor & Destructor Documentation

Choice_solution::Choice_solution (Parameters & *par*)

Constructor.

Parameters

in	*par*	contains all the values from the parameter

Warning

Error: the dimension is ***
This *** solution for L=*** does not exist!
*** solutions for the domain *** do not exist!

Note

If the solution does not exists, the code will exit with failure termination code.

Todo Exceptions should be treated.

Definition at line 60 of file choice_solution.cpp.

Choice_solution::~Choice_solution ( ) [virtual]

Destructor.

Definition at line 615 of file choice_solution.cpp.

5.3.3 Member Function Documentation

void Choice_solution::compute ( )

Computes the solution.

Definition at line 611 of file choice_solution.cpp.

The documentation for this class was generated from the following files:

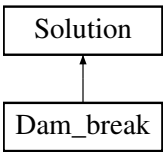
- Headers/choice_solution.hpp
- Sources/choice_solution.cpp

5.4 Dam_break Class Reference

Computes dam break solutions.

`#include <dam_break.hpp>`

Inheritance diagram for Dam_break:



Public Member Functions

- Dam_break (Parameters &)

  Constructor.
- virtual ∼Dam_break ()

  Destructor.
- void compute ()

  Computes the solution.
- SCALAR function (SCALAR, SCALAR, SCALAR) const

  Function $x^6 - 9v_{right}^2 x^4 + 16v_{left}\, v_{right}^2 x^3 - v_{right}^2 (v_{right}^2 + 8v_{left}^2) x^2 + v_{right}^6$ *to get the roots by dichotomy.*
- void param (SCALAR, SCALAR, SCALAR, SCALAR) const

  Writes the parameters of the solution.

Additional Inherited Members

5.4.1 Detailed Description

Computes dam break solutions.

Class that computes the solutions for a dam break without friction, see Ritter [1892] Stoker [1957].

Definition at line 69 of file dam_break.hpp.

5.4.2 Constructor & Destructor Documentation

Dam_break::Dam_break (Parameters & *par*)

Constructor.

Defines the physical parameters, the final time and prints the header with the configuration.

Parameters

in	*par*	contains all the values from the parameters

Modifies

Solution::dx_ex, Solution::L, Solution::T, Solution::xex, Solution::zex to have the dam break configuration.

Definition at line 58 of file dam_break.cpp.

Dam_break::∼Dam_break ( ) [virtual]

Destructor.

Definition at line 106 of file dam_break.cpp.

5.4.3 Member Function Documentation

void Dam_break::compute ( ) [virtual]

Computes the solution.

Computes the chosen dam break solution, see Ritter [1892] Stoker [1957].

Modifies

Solution::hex.

Implements Solution.

Definition at line 111 of file dam_break.cpp.

SCALAR Dam_break::function (SCALAR *x*, SCALAR *v_left*, SCALAR *v_right*) const

Function $x^6 - 9v_{right}^2 x^4 + 16v_{left}\, v_{right}^2 x^3 - v_{right}^2 (v_{right}^2 + 8v_{left}^2)x^2 + v_{right}^6$ to get the roots by dichotomy.

Function to solve by dichotomy the equation $cm^6 - 9v_{right}^2 cm^4 + 16v_{left}\, v_{right}^2 cm^3 - v_{right}^2 (v_{right}^2 + 8v_{left}^2)cm^2 + v_{right}^6 = 0$.

Returns

Value of $x^6 - 9v_{right}^2 x^4 + 16v_{left}\, v_{right}^2 x^3 - v_{right}^2 (v_{right}^2 + 8v_{left}^2)x^2 + v_{right}^6$.

Definition at line 186 of file dam_break.cpp.

void Dam_break::param (SCALAR *L*, SCALAR *xdam*, SCALAR *dx_ex*, SCALAR *T*) const

Writes the parameters of the solution.

Parameters

in	*L*	length of the domain
in	*xdam*	position of the dam
in	*dx_ex*	space step
in	*T*	final time

Definition at line 198 of file dam_break.cpp.

The documentation for this class was generated from the following files:

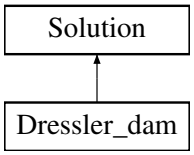
- Headers/dam_break.hpp
- Sources/dam_break.cpp

5.5 Dressler_dam Class Reference

Computes Dressler dam break solution.

`#include <dressler_dam.hpp>`

Inheritance diagram for Dressler_dam:



Public Member Functions

- Dressler_dam (Parameters &)
  Constructor.
- virtual ~Dressler_dam ()
  Destructor.
- void compute ()
  Computes the solution.
- void param (SCALAR, SCALAR, SCALAR, SCALAR, SCALAR) const
  Writes the parameters of the solution.

Additional Inherited Members

5.5.1 Detailed Description

Computes Dressler dam break solution.

Class that computes the solutions for a dam break with friction, see Dressler [1952].
Definition at line 70 of file dressler_dam.hpp.

5.5.2 Constructor & Destructor Documentation

Dressler_dam::Dressler_dam (Parameters & *par*)

Constructor.

Defines the physical parameters, the final time and prints the header with the configuration.

Parameters

in	*par*	contains all the values from the parameters

Warning

Problem: allocation of hexd failed.

Modifies

Solution::dx_ex, Solution::L, Solution::xex, Solution::zex to have Dressler dam break configuration.

Note

If the vector hexd cannot be allocated, the code will exit with failure termination code.

Definition at line 60 of file dressler_dam.cpp.

Dressler_dam::~Dressler_dam ( ) [virtual]

Destructor.

Definition at line 102 of file dressler_dam.cpp.

5.5.3 Member Function Documentation

void Dressler_dam::compute ( ) [virtual]

Computes the solution.

Computes Dressler solution, see Dressler [1952].

Modifies

Solution::hex, Solution::uex.

Implements Solution.
Definition at line 106 of file dressler_dam.cpp.

void Dressler_dam::param (SCALAR *L,* SCALAR *xdam,* SCALAR *C,* SCALAR *dx_ex,* SCALAR *T*) const

Writes the parameters of the solution.

Parameters

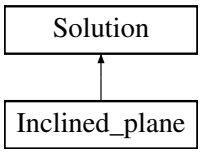
in	*L*	length of the domain
in	*xdam*	position of the dam
in	*C*	Chezy friction coefficient
in	*dx_ex*	space step
in	*T*	final time

Definition at line 207 of file dressler_dam.cpp.
The documentation for this class was generated from the following files:

- Headers/dressler_dam.hpp
- Sources/dressler_dam.cpp

5.6 Inclined_plane Class Reference

Computes the solutions over an inclined plane.
`#include <inclined_plane.hpp>`
Inheritance diagram for Inclined_plane:



Public Member Functions

- Inclined_plane (Parameters &)
  Constructor.
- virtual ∼Inclined_plane ()
  Destructor.
- void compute ()
  Computes the solution.
- SCALAR p (SCALAR, SCALAR, SCALAR) const
  Coefficient p for Cardano method.
- SCALAR q (SCALAR, SCALAR, SCALAR, SCALAR) const
  Coefficient q for Cardano method.
- SCALAR determinant (SCALAR, SCALAR) const
  Determinant for Cardano method.
- SCALAR height (SCALAR, SCALAR, SCALAR, SCALAR, SCALAR) const
  Computation of the 3rd order polynomia roots.
- void abcd (SCALAR, SCALAR, SCALAR, SCALAR, SCALAR &, SCALAR &, SCALAR &, SCALAR &)
  Defines a, b, c, d in order to solve $ah^3 + bh^2 + ch + d$.
- void param (SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR) const
  Writes the parameters of the solution.

Additional Inherited Members

5.6.1 Detailed Description

Computes the solutions over an inclined plane.
Class that computes the solutions over an inclined plane, see Delestre et al. [2012].
Definition at line 71 of file inclined_plane.hpp.

5.6.2 Constructor & Destructor Documentation

Inclined_plane::Inclined_plane (Parameters & *par*)

Constructor.

Defines the physical parameters and prints the header with the configuration.

The solution is saved at the steady state.

Parameters

in	*par*	contains all the values from the parameters

Modifies

Solution::dx_ex, Solution::L, Solution::xex, Solution::zex to have the inclined plane configuration.

Definition at line 60 of file inclined_plane.cpp.

Inclined_plane::~Inclined_plane ( ) [virtual]

Destructor.

Definition at line 95 of file inclined_plane.cpp.

5.6.3 Member Function Documentation

void Inclined_plane::abcd (SCALAR *q_in*, SCALAR *h_in*, SCALAR *alpha*, SCALAR *x*, SCALAR & *a*, SCALAR & *b*, SCALAR & *c*, SCALAR & *d*)

Defines a, b, c, d in order to solve ah^3+bh^2+ch+d.

Enters the coefficients of the 3rd order polynomia we want to solve: ah^3+bh^2+ch+d.

Parameters

in	*q_in*	inflow discharge
in	*h_in*	water height at the inflow
in	*alpha*	the slope
in	*x*	the position
out	*a*	coefficient of the 3rd order polynomia
out	*b*	coefficient of the 3rd order polynomia
out	*c*	coefficient of the 3rd order polynomia
out	*d*	coefficient of the 3rd order polynomia

Definition at line 229 of file inclined_plane.cpp.

void Inclined_plane::compute ( ) [virtual]

Computes the solution.

Computes the solution on an inclined plane, see Delestre et al. [2012].

Modifies

Solution::hex.

Implements Solution.

Definition at line 98 of file inclined_plane.cpp.

SCALAR Inclined_plane::determinant (SCALAR *p*, SCALAR *q*) const

Determinant for Cardano method.

Determinant in the Cardano method/related to number of roots.

Parameters

in	*p*	computed by Inclined_plane::p
in	*q*	computed by Inclined_plane::q

Returns

Value of $q^2 + \frac{4}{27}p^3$.

Definition at line 155 of file inclined_plane.cpp.

SCALAR Inclined_plane::height (SCALAR *p,* SCALAR *q,* SCALAR *a,* SCALAR *b,* SCALAR *hnear*) const

Computation of the 3rd order polynomia roots.

Parameters

in	*p*	computed by Inclined_plane::p
in	*q*	computed by Inclined_plane::q
in	*a*	coefficient of the 3rd order polynomia
in	*b*	coefficient of the 3rd order polynomia
in	*hnear*	height of the previous or following cell (depending on the height computation direction)

Warning

Error: no positive height.
Error: Probably irregular solution.

Returns

h, the water height.

Definition at line 169 of file inclined_plane.cpp.

SCALAR Inclined_plane::p (SCALAR *a,* SCALAR *b,* SCALAR *c*) const

Coefficient p for Cardano method.

Parameters

in	*a*	coefficient of the 3rd order polynomia
in	*b*	coefficient of the 3rd order polynomia
in	*c*	coefficient of the 3rd order polynomia

Returns

Value of $-\frac{b^2}{3a^2} + \frac{c}{a}$.

Definition at line 126 of file inclined_plane.cpp.

void Inclined_plane::param (SCALAR *L,* SCALAR *dx_ex,* SCALAR *alpha,* SCALAR *beta,* SCALAR *h0,* SCALAR *q0*) const

Writes the parameters of the solution.

Parameters

in	*L*	length of the domain
in	*dx_ex*	space step
in	*alpha*	the slope of the plane
in	*beta*	the value of the topography for x=0
in	*h0*	the left (imposed) water height
in	*q0*	the left (imposed) water discharge

Definition at line 255 of file inclined_plane.cpp.

SCALAR Inclined_plane::q (SCALAR *a*, SCALAR *b*, SCALAR *c*, SCALAR *d*) const

Coefficient q for Cardano method.

Parameters

in	*a*	coefficient of the 3rd order polynomia
in	*b*	coefficient of the 3rd order polynomia
in	*c*	coefficient of the 3rd order polynomia
in	*d*	coefficient of the 3rd order polynomia

Returns

Value of $\frac{b}{27a}\left(\frac{2b^2}{a^2}-9\frac{c}{a}\right)$.

Definition at line 139 of file inclined_plane.cpp.

The documentation for this class was generated from the following files:

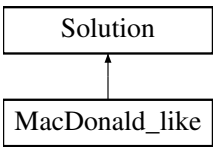
- Headers/inclined_plane.hpp
- Sources/inclined_plane.cpp

5.7 MacDonald_like Class Reference

Computes Mac Donald solutions.

`#include <macdonald_like.hpp>`

Inheritance diagram for MacDonald_like:



Public Member Functions

- MacDonald_like (Parameters &)

  Constructor.
- virtual ~MacDonald_like ()

  Destructor.
- void compute ()

  Computes the solution.
- SCALAR Delta_topo_Manning (SCALAR, SCALAR, SCALAR, SCALAR, SCALAR) const

  Evaluation of the slope variation for Manning friction law.
- SCALAR Delta_topo_Darcy_Weisbach (SCALAR, SCALAR, SCALAR, SCALAR, SCALAR) const

Evaluation of the slope variation for Darcy-Weisbach friction law.

- void param (SCALAR, SCALAR) const

  Writes the parameters of the solution.

Additional Inherited Members

5.7.1 Detailed Description

Computes Mac Donald solutions.

Class that computes Mac Donald solutions in 1d, see MacDonald [1996], MacDonald et al. [1997], Delestre et al. [2013] and Vo T. N. [2008].

Definition at line 73 of file macdonald_like.hpp.

5.7.2 Constructor & Destructor Documentation

MacDonald_like::MacDonald_like (Parameters & *par*)

Constructor.

Defines the physical parameters and prints the header with the configuration.
The solution is saved at the steady state.

Parameters

in	*par*	contains all the values from the parameters

Warning

Problem: allocation of dhex failed.

Modifies

Solution::dx_ex, Solution::L, Solution::xex, Solution::hex, Solution::qex to have Mac Donald configuration.

Note

If the vector dhex cannot be allocated, the code will exit with failure termination code.

Definition at line 59 of file macdonald_like.cpp.

MacDonald_like::~MacDonald_like ( ) [virtual]

Destructor.

Definition at line 434 of file macdonald_like.cpp.

5.7.3 Member Function Documentation

void MacDonald_like::compute ( ) [virtual]

Computes the solution.

Computes Mac Donald solutions, see MacDonald [1996], MacDonald et al. [1997], Delestre et al. [2013] and Vo T. N. [2008].

Modifies

Solution::zex.

Implements Solution.

Definition at line 439 of file macdonald_like.cpp.

SCALAR MacDonald_like::Delta_topo_Darcy_Weisbach (SCALAR *q*, SCALAR *h*, SCALAR *dh*, SCALAR *Rain*, SCALAR *c*) const

Evaluation of the slope variation for Darcy-Weisbach friction law.

Parameters

in	*q*	discharge
in	*h*	water height
in	*dh*	variation of the water height
in	*Rain*	rain quantity
in	*c*	friction coefficient

Returns

Value of $\left(1-\frac{q^2}{gh^3}\right)dh+2Rain\frac{q}{gh^2}+c\frac{q^2}{8gh^3}$.

Definition at line 496 of file macdonald_like.cpp.

SCALAR MacDonald_like::Delta_topo_Manning (SCALAR *q*, SCALAR *h*, SCALAR *dh*, SCALAR *Rain*, SCALAR *c*) const

Evaluation of the slope variation for Manning friction law.

Parameters

in	*q*	discharge
in	*h*	water height
in	*dh*	variation of the water height
in	*Rain*	rain quantity
in	*c*	friction coefficient

Returns

Value of $\left(1-\frac{q^2}{gh^3}\right)dh+2Rain\frac{q}{gh^2}+\frac{c^2q^2}{h^{10/3}}$.

Definition at line 481 of file macdonald_like.cpp.

void MacDonald_like::param (SCALAR *L*, SCALAR *dx_ex*) const

Writes the parameters of the solution.

Parameters

in	*L*	length of the domain
in	*dx_ex*	space step

Definition at line 512 of file macdonald_like.cpp.

The documentation for this class was generated from the following files:

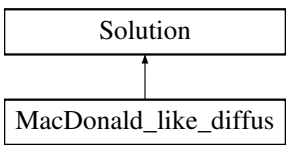
- Headers/macdonald_like.hpp
- Sources/macdonald_like.cpp

5.8 MacDonald_like_diffus Class Reference

Computes Mac Donald solutions with diffusion.

`#include <macdonald_like_diffus.hpp>`

Inheritance diagram for MacDonald_like_diffus:



Public Member Functions

- MacDonald_like_diffus (Parameters &)

  Constructor.
- virtual ~MacDonald_like_diffus ()

  Destructor.
- void compute ()

  Computes the solution.
- SCALAR Delta_topo_diffus (SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR) const

  Evaluation of the slope variation.
- void param (SCALAR, SCALAR) const

  Writes the parameters of the solution.

Additional Inherited Members

5.8.1 Detailed Description

Computes Mac Donald solutions with diffusion.

Class that computes Mac Donald solutions in 1d with diffusion, see Delestre and Marche [2010].

Definition at line 70 of file macdonald_like_diffus.hpp.

5.8.2 Constructor & Destructor Documentation

MacDonald_like_diffus::MacDonald_like_diffus (Parameters & *par*)

Constructor.

Defines the physical parameters and prints the header with the configuration.

The solution is saved at the steady state.

Parameters

in	*par*	contains all the values from the parameters

Warning

Problem: allocation of dhex failed.
Problem: allocation of ddhex failed.

Modifies

Solution::dx_ex, Solution::L, Solution::xex, Solution::hex, Solution::qex to have Mac Donald configuration.

Note

If the vector dhex (or ddhex) cannot be allocated, the code will exit with failure termination code.

Definition at line 58 of file macdonald_like_diffus.cpp.

MacDonald_like_diffus::~MacDonald_like_diffus ( ) [virtual]

Destructor.

Definition at line 154 of file macdonald_like_diffus.cpp.

5.8.3 Member Function Documentation

void MacDonald_like_diffus::compute ( ) [virtual]

Computes the solution.

Computes Mac Donald solutions with diffusion, see Delestre and Marche [2010].

Modifies

Solution::zex.

Implements Solution.

Definition at line 160 of file macdonald_like_diffus.cpp.

SCALAR MacDonald_like_diffus::Delta_topo_diffus (SCALAR *q*, SCALAR *h*, SCALAR *dh*, SCALAR *ddh*, SCALAR *kt*, SCALAR *kl*, SCALAR *muv*, SCALAR *muh*) const

Evaluation of the slope variation.

Parameters

in	*q*	discharge
in	*h*	water height
in	*dh*	variation of the water height
in	*ddh*	second order derivative of h
in	*kt*	turbulent coefficient
in	*kl*	laminar coefficient
in	*muv*	vertical viscosity
in	*muh*	horizontal viscosity

Returns

Value of $\left(1-\frac{q^2}{gh^3}\right)dh+\frac{kl\,q}{gh^2(1+\frac{kl\,h}{3muv})}+\frac{kt\,q^2}{gh^2(1+\frac{kl\,h}{3muv})^2}+4muh\frac{q\,ddh-\frac{q\,dh^2}{h}}{gh^2}$.

Definition at line 195 of file macdonald_like_diffus.cpp.

void MacDonald_like_diffus::param (SCALAR *L*, SCALAR *dx_ex*) const

Writes the parameters of the solution.

Parameters

in	*L*	length of the domain
in	*dx_ex*	space step

Definition at line 213 of file macdonald_like_diffus.cpp.

The documentation for this class was generated from the following files:

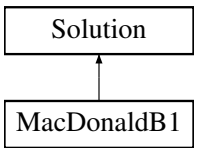
- Headers/macdonald_like_diffus.hpp
- Sources/macdonald_like_diffus.cpp

5.9 MacDonaldB1 Class Reference

Computes Mac Donald pseudo 2d solutions.

`#include <macdonaldb1.hpp>`

Inheritance diagram for MacDonaldB1:



Public Member Functions

- MacDonaldB1 (Parameters &)

  Constructor.
- virtual ∼MacDonaldB1 ()

  Destructor.
- void compute ()

  Computes the solution.
- void param (SCALAR, SCALAR, SCALAR) const

  Writes the parameters of the solution.
- SCALAR Delta_topo (SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR) const

  Evaluation of the slope variation.

Additional Inherited Members

5.9.1 Detailed Description

Computes Mac Donald pseudo 2d solutions.

Class that computes Mac Donald pseudo 2d solutions with bottom B1, see MacDonald [1996].

Definition at line 69 of file macdonaldb1.hpp.

5.9.2 Constructor & Destructor Documentation

MacDonaldB1::MacDonaldB1 (Parameters & *par*)

Constructor.

Defines the physical parameters and prints the header with the configuration.

The solution is saved at the steady state.

Parameters

in	*par*	contains all the values from the parameters

Modifies

Solution::dx_ex, Solution::L, Solution::xex, Solution::hex to have Mac Donald configuration.

Definition at line 58 of file macdonaldb1.cpp.

MacDonaldB1::∼MacDonaldB1 ( ) [virtual]

Destructor.

Definition at line 227 of file macdonaldb1.cpp.

5.9.3 Member Function Documentation

void MacDonaldB1::compute ( ) [virtual]

Computes the solution.

Computes Mac Donald solutions with bottom B1, see MacDonald [1996].

Modifies

Solution::zex.

Implements Solution.

Definition at line 162 of file macdonaldb1.cpp.

SCALAR MacDonaldB1::Delta_topo (SCALAR *h,* SCALAR *hp,* SCALAR *b,* SCALAR *bp,* SCALAR *Q,* SCALAR *n,* SCALAR *Z,* SCALAR *exp1,* SCALAR *exp2*) const

Evaluation of the slope variation.

Parameters

in	*h*	water height
in	*hp*	derivative of the water height
in	*b*	boundary function
in	*bp*	derivative of the boundary function
in	*Q*	discharge
in	*n*	friction coefficient
in	*Z*	slope
in	*exp1*	exponent, equal to 4/3
in	*exp2*	exponent, equal to 10/3

Returns

Value of $hp\left(\frac{Q^2(b+2Zh)}{g(h(b+Zh))^3}-1\right)-Q^2n^2\frac{(b+2h\sqrt{1+Z^2})^{exp1}}{(h(b+Zh))^{exp2}}+\frac{Q^2bp}{gh^2(b+Zh)^3}$.

Definition at line 186 of file macdonaldb1.cpp.

void MacDonaldB1::param (SCALAR *L*, SCALAR *dx_ex*, SCALAR *n*) const

Writes the parameters of the solution.

Parameters

in	*L*	length of the domain
in	*dx_ex*	space step
in	*n*	friction coefficient

Definition at line 205 of file macdonaldb1.cpp.

The documentation for this class was generated from the following files:

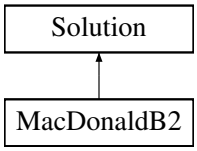
- Headers/macdonaldb1.hpp
- Sources/macdonaldb1.cpp

5.10 MacDonaldB2 Class Reference

Computes Mac Donald pseudo 2d solutions.

`#include <macdonaldb2.hpp>`

Inheritance diagram for MacDonaldB2:



Public Member Functions

- MacDonaldB2 (Parameters &)

  Constructor.
- virtual ~MacDonaldB2 ()

  Destructor.
- void compute ()

  Computes the solution.
- void param (SCALAR, SCALAR, SCALAR) const

Writes the parameters of the solution.

- SCALAR Delta_topo (SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR) const

  Evaluation of the slope variation.

Additional Inherited Members

5.10.1 Detailed Description

Computes Mac Donald pseudo 2d solutions.

Class that computes Mac Donald pseudo 2d solutions with bottom B2, see MacDonald [1996].

Definition at line 70 of file macdonaldb2.hpp.

5.10.2 Constructor & Destructor Documentation

MacDonaldB2::MacDonaldB2 (Parameters & *par*)

Constructor.

Defines the physical parameters and prints the header with the configuration.

The solution is saved at the steady state.

Parameters

in	*par*	contains all the values from the parameters

Modifies

Solution::dx_ex, Solution::L, Solution::xex, Solution::hex to have Mac Donald configuration.

Definition at line 58 of file macdonaldb2.cpp.

MacDonaldB2::~MacDonaldB2 ( ) [virtual]

Destructor.

Definition at line 197 of file macdonaldb2.cpp.

5.10.3 Member Function Documentation

void MacDonaldB2::compute ( ) [virtual]

Computes the solution.

Computes Mac Donald solutions with bottom B2, see MacDonald [1996].

Modifies

Solution::zex.

Implements Solution.

Definition at line 132 of file macdonaldb2.cpp.

SCALAR MacDonaldB2::Delta_topo (SCALAR *h*, SCALAR *hp*, SCALAR *b*, SCALAR *bp*, SCALAR *Q*, SCALAR *n*, SCALAR *Z*, SCALAR *exp1*, SCALAR *exp2*) const

Evaluation of the slope variation.

Parameters

in	*h*	water height
in	*hp*	derivative of the water height
in	*b*	boundary function
in	*bp*	derivative of the boundary function
in	*Q*	discharge
in	*n*	friction coefficient
in	*Z*	slope
in	*exp1*	exponent, equal to 4/3
in	*exp2*	exponent, equal to 10/3

Returns

Value of $hp\left(\frac{Q^2(b+2Zh)}{g(h(b+Zh))^3}-1\right)-Q^2n^2\frac{(b+2h\sqrt{1+Z^2})^{exp1}}{(h(b+Zh))^{exp2}}+\frac{Q^2bp}{gh^2(b+Zh)^3}$.

Definition at line 178 of file macdonaldb2.cpp.

void MacDonaldB2::param (SCALAR *L*, SCALAR *dx_ex*, SCALAR *n*) const

Writes the parameters of the solution.

Parameters

in	*L*	length of the domain
in	*dx_ex*	space step
in	*n*	friction coefficient

Definition at line 156 of file macdonaldb2.cpp.

The documentation for this class was generated from the following files:

- Headers/macdonaldb2.hpp
- Sources/macdonaldb2.cpp

5.11 Parameters Class Reference

Gets parameters.

`#include <parameters.hpp>`

Public Member Functions

- Parameters (int, char **)

  Constructor.
- virtual ~Parameters ()

  Destructor.
- void help () const

  Prints help.
- int get_nxex () const

  Gives the number of cells in x.
- int get_nyex () const

  Gives the number of cells in y.
- SCALAR get_choicedim () const

  Gives the dimension.
- int get_choicetype () const

  Gives the type.
- int get_choice () const

Gives the chosen solution.

- int get_choicedomain () const

  Gives the domain.

Protected Attributes

- int nx_ex
- int ny_ex
- SCALAR choicedim
- int choicetype
- int choice
- int choicedomain

5.11.1 Detailed Description

Gets parameters.

Class that reads the parameters, checks their values and contains all the common declarations to get the values of the parameters.

Definition at line 69 of file parameters.hpp.

5.11.2 Constructor & Destructor Documentation

Parameters::Parameters (int *argc,* char ** *argv*)

Constructor.

Checks the arguments

Parameters

in	*argc*	number of arguments
in	*argv*	value of the arguments

Warning

The number of cells in x must be positive!
The number of cells in y must be positive!

Modifies

Parameters::choicedim, Parameters::choicetype, Parameters::choicedomain, Parameters::choice with the values given in argument.

Note

If the arguments are incompatible, the code will exit with failure termination code.

Definition at line 58 of file parameters.cpp.

Parameters::~Parameters ( ) [virtual]

Destructor.

Definition at line 109 of file parameters.cpp.

5.11.3 Member Function Documentation

int Parameters::get_choice ( ) const

Gives the chosen solution.

Returns

The chosen solution.

Definition at line 221 of file parameters.cpp.

SCALAR Parameters::get_choicedim ( ) const

Gives the dimension.

Returns

The dimension of the solution.

Definition at line 231 of file parameters.cpp.

int Parameters::get_choicedomain ( ) const

Gives the domain.

Returns

The domain of the solution.

Definition at line 251 of file parameters.cpp.

int Parameters::get_choicetype ( ) const

Gives the type.

Returns

The type of the solution.

Definition at line 241 of file parameters.cpp.

int Parameters::get_nxex ( ) const

Gives the number of cells in x.

Returns

The number of cells in x.

Definition at line 201 of file parameters.cpp.

int Parameters::get_nyex ( ) const

Gives the number of cells in y.

Returns

The number of cells in y.

Definition at line 211 of file parameters.cpp.

void Parameters::help ( ) const

Prints help.

Prints how to use the code.

Definition at line 112 of file parameters.cpp.

5.11.4 Member Data Documentation

int Parameters::choice [protected]

Value corresponding to the chosen solution.

Definition at line 81 of file parameters.hpp.

SCALAR Parameters::choicedim [protected]

Value corresponding to the dimension of the solution.

Definition at line 77 of file parameters.hpp.

int Parameters::choicedomain [protected]

Value corresponding to the domain of the solution.

Definition at line 83 of file parameters.hpp.

int Parameters::choicetype [protected]

Value corresponding to the type of the solution.

Definition at line 79 of file parameters.hpp.

int Parameters::nx_ex [protected]

Number of cells in x.

Definition at line 73 of file parameters.hpp.

int Parameters::ny_ex [protected]

Number of cells in y.

Definition at line 75 of file parameters.hpp.

The documentation for this class was generated from the following files:

- Headers/parameters.hpp

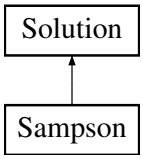
5.12 Sampson Class Reference

Computes Sampson solution.

`#include <sampson.hpp>`

Inheritance diagram for Sampson:



Public Member Functions

- Sampson (Parameters &)

  Constructor.
- virtual ~Sampson ()

  Destructor.
- void compute ()

  Computes the solution.
- void param (SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR) const

  Writes the parameters of the solution.

Additional Inherited Members

5.12.1 Detailed Description

Computes Sampson solution.

Class that computes the solution for Sampson parabola with friction, see Sampson et al. [2006] Sampson et al. [2008].

Definition at line 70 of file sampson.hpp.

5.12.2 Constructor & Destructor Documentation

Sampson::Sampson (Parameters & *par*)

Constructor.

Defines the physical parameters, the final time and prints the header with the configuration.

Parameters

in	*par*	contains all the values from the parameters

Modifies

Solution::dx_ex, Solution::L, Solution::T, Solution::xex, Solution::zex to have Sampson configuration.

Definition at line 58 of file sampson.cpp.

Sampson::~Sampson ( ) [virtual]

Destructor.

Definition at line 90 of file sampson.cpp.

5.12.3 Member Function Documentation

void Sampson::compute ( ) [virtual]

Computes the solution.

Computes Sampson solution, see Sampson et al. [2006] Sampson et al. [2008].

Modifies

Solution::hex, Solution::uex.

Implements Solution.

Definition at line 94 of file sampson.cpp.

void Sampson::param (SCALAR *L,* SCALAR *h0,* SCALAR *a,* SCALAR *B,* SCALAR *tau,* SCALAR *dx_ex,* SCALAR *T*) const

Writes the parameters of the solution.

Parameters

in	*L*	length of the domain
in	*h0*	value of the topography in the center of the domain
in	*a*	parameter of the topography
in	*B*	constant for the initial condition
in	*tau*	friction coefficient
in	*dx_ex*	space step
in	*T*	final time

Definition at line 121 of file sampson.cpp.
The documentation for this class was generated from the following files:

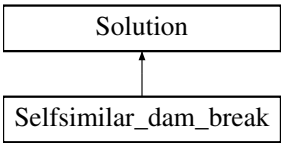
- Headers/sampson.hpp
- Sources/sampson.cpp

5.13 Selfsimilar_dam_break Class Reference

Computes self-similar dam break solutions.

`#include <selfsimilar_dam_break.hpp>`

Inheritance diagram for Selfsimilar_dam_break:



Public Member Functions

- Selfsimilar_dam_break (Parameters &)
  Constructor.
- virtual ~Selfsimilar_dam_break ()
  Destructor.
- void compute ()
  Computes the solution.
- void param (SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR) const
  Writes the parameters of the solution.

Additional Inherited Members

5.13.1 Detailed Description

Computes self-similar dam break solutions.

Class that computes the self-similar solutions for dam break with friction, see Self-similar_solutions.pdf in the doc folder or in the bibliography of sourcesup.

Definition at line 71 of file selfsimilar_dam_break.hpp.

5.13.2 Constructor & Destructor Documentation

Selfsimilar_dam_break::Selfsimilar_dam_break (Parameters & *par*)

Constructor.

Defines the physical parameters, the final time and prints the header with the configuration.

Parameters

in	*par*	contains all the values from the parameters

Modifies

Solution::dx_ex, Solution::L, Solution::T, Solution::xex, Solution::zex to have the self-similar dam break configuration.

Definition at line 59 of file selfsimilar_dam_break.cpp.

Selfsimilar_dam_break::~Selfsimilar_dam_break ( ) [virtual]

Destructor.

Definition at line 138 of file selfsimilar_dam_break.cpp.

5.13.3 Member Function Documentation

void Selfsimilar_dam_break::compute ( ) [virtual]

Computes the solution.

Computes the chosen self-similar dam break solution, see Self-similar_solutions.pdf in the doc folder or in the bibliography of sourcesup.

Modifies

Solution::hex.

Implements Solution.

Definition at line 143 of file selfsimilar_dam_break.cpp.

void Selfsimilar_dam_break::param (SCALAR *L,* SCALAR *xL,* SCALAR *xR,* SCALAR *hinit,* SCALAR *k1,* SCALAR *dx_ex,* SCALAR *T*) const

Writes the parameters of the solution.

Parameters

in	*L*	length of the domain
in	*xL*	left bound for the water
in	*xR*	right bound for the water
in	*hinit*	initial height of the fluid
in	*k1*	inverse of the friction coefficient in SW equations
in	*dx_ex*	space step
in	*T*	final time

Definition at line 181 of file selfsimilar_dam_break.cpp.

The documentation for this class was generated from the following files:

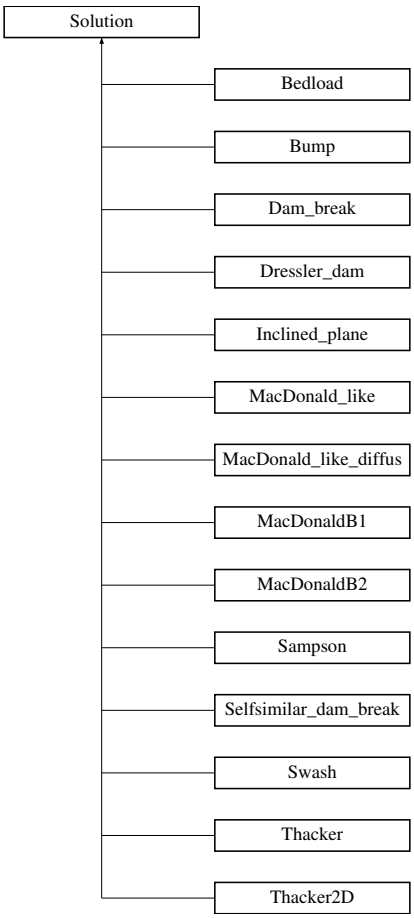
- Headers/selfsimilar_dam_break.hpp
- Sources/selfsimilar_dam_break.cpp

5.14 Solution Class Reference

Analytic solution.

`#include <solution.hpp>`

Inheritance diagram for Solution:



Public Member Functions

- Solution (Parameters &)

  Constructor.
- void allocation ()

  Allocations of the tables.
- void deallocation ()

  deallocation of the tables
- virtual void compute ()=0

  Function to be specified in case.
- void savefinalcritical (SCALAR ∗, SCALAR ∗, SCALAR ∗, SCALAR ∗) const

  Saves the analytic solution at the final time with the critical height.
- void savefinalcriticalinit (SCALAR ∗, SCALAR ∗, SCALAR ∗, SCALAR ∗, SCALAR ∗) const

  Saves the analytic solution at the final time with the critical height and the initial topography.
- void savefinalmu (SCALAR ∗, SCALAR ∗, SCALAR ∗) const

  Saves the analytic solution at the final time without u.
- void savefinal2D (SCALAR ∗, SCALAR ∗, TAB, TAB, TAB, TAB) const

  Saves the analytic solution at the final time in 2D.
- void head (Parameters &, string, string) const

  Writes the version of the software and the choice of the solution.
- virtual ∼Solution ()

  Destructor.

Protected Attributes

- const int NX_EX
- const int NY_EX
- SCALAR T
- SCALAR L
- SCALAR I
- SCALAR dx_ex
- SCALAR dy_ex
- SCALAR * xex
- SCALAR * yex
- SCALAR * hex
- SCALAR * uex
- SCALAR * qex
- SCALAR * zex

5.14.1 Detailed Description

Analytic solution.

Class that contains all the common declarations for the solutions.

Definition at line 68 of file solution.hpp.

5.14.2 Constructor & Destructor Documentation

Solution::Solution (Parameters & *par*)

Constructor.

Parameters

in	*par*	contains all the values from the parameters file

Definition at line 58 of file solution.cpp.

Solution::~Solution ( ) [virtual]

Destructor.

Definition at line 186 of file solution.cpp.

5.14.3 Member Function Documentation

void Solution::allocation ( )

Allocations of the tables.

Allocation of Solution::xex, Solution::yex, Solution::hex, Solution::uex, Solution::qex, Solution::zex.

Warning

Problem: allocation of xex failed.
Problem: allocation of yex failed.
Problem: allocation of hex failed.
Problem: allocation of uex failed.
Problem: allocation of qex failed.
Problem: allocation of zex failed.

Note

If a vector cannot be allocated, the code will exit with failure termination code.

Definition at line 191 of file solution.cpp.

virtual void Solution::compute ( ) [pure virtual]

Function to be specified in case.

Implemented in MacDonald_like, Bump, Inclined_plane, Selfsimilar_dam_break, Bedload, Dressler_dam, MacDonald_like_diffus, MacDonaldB2, Sampson, Dam_break, MacDonaldB1, Swash, Thacker, and Thacker2D.

void Solution::deallocation ( )

deallocation of the tables

deallocation of Solution::xex, Solution::yex, Solution::hex, Solution::uex, Solution::qex, Solution::zex.

Definition at line 243 of file solution.cpp.

void Solution::head (Parameters & *par,* string *solutiontype,* string *solutionchoice*) const

Writes the version of the software and the choice of the solution.

Parameters

in	*par*	parameter, contains all the values from the parameters file
in	*solutiontype*	name of the type of the solution
in	*solutionchoice*	name of the solution

Definition at line 166 of file solution.cpp.

void Solution::savefinal2D (SCALAR * *xex,* SCALAR * *yex,* TAB *hex2D,* TAB *uex2D,* TAB *vex2D,* TAB *zex2D*) const

Saves the analytic solution at the final time in 2D.

Saves x and y (the position), h (the water height), u and v (the flow velocities in x and y), z+h (the free surface), z (the topography), U (the norm of the velocity), Fr (the Froude number), qx, qy and q (the flow discharge in x, y and its norm).

Parameters

in	*xex*	abscissae
in	*yex*	ordinates
in	*hex2D*	water height
in	*uex2D*	flow velocity in x
in	*vex2D*	flow velocity in y
in	*zex2D*	topography

Definition at line 135 of file solution.cpp.

void Solution::savefinalcritical (SCALAR * *xex,* SCALAR * *hex,* SCALAR * *uex,* SCALAR * *zex*) const

Saves the analytic solution at the final time with the critical height.

Saves x (the position), h (the water height), u (the flow velocity), z (the topography), q (the flow discharge), z+h (the free surface), Fr (the Froude number) and z+hc (the critical surface).

Parameters

in	*xex*	abscissae
in	*hex*	water height
in	*uex*	flow velocity

in	*zex*	topography

Definition at line 69 of file solution.cpp.

void Solution::savefinalcriticalinit (SCALAR * *xex,* SCALAR * *hex,* SCALAR * *uex,* SCALAR * *zex,* SCALAR * *z0*) const

Saves the analytic solution at the final time with the critical height and the initial topography.

Saves x (the position), h (the water height), u (the flow velocity), z (the topography), q (the flow discharge), z+h (the free surface), Fr (the Froude number), z+hc (the critical surface), z0 (the initial topography) and z0+h (the initial surface).

Parameters

in	*xex*	abscissae
in	*hex*	water height
in	*uex*	flow velocity
in	*zex*	topography
in	*z0*	initial topography

Definition at line 93 of file solution.cpp.

void Solution::savefinalmu (SCALAR * *xex,* SCALAR * *hex,* SCALAR * *zex*) const

Saves the analytic solution at the final time without u.

Saves x (the position), h (the water height), z (the topography) and z+h (the free surface).

Parameters

in	*xex*	abscissae
in	*hex*	water height
in	*zex*	topography

Definition at line 118 of file solution.cpp.

5.14.4 Member Data Documentation

SCALAR Solution::dx_ex [protected]

Space step in x.

Definition at line 83 of file solution.hpp.

SCALAR Solution::dy_ex [protected]

Space step in y.

Definition at line 85 of file solution.hpp.

SCALAR* Solution::hex [protected]

Array for the water height.

Definition at line 92 of file solution.hpp.

SCALAR Solution::L [protected]

Dimensions of the domain in x.

Definition at line 79 of file solution.hpp.

SCALAR Solution::l [protected]

Dimensions of the domain in y.

Definition at line 81 of file solution.hpp.

const int Solution::NX_EX [protected]

Number of cells in x.
Definition at line 72 of file solution.hpp.

const int Solution::NY_EX [protected]

Number of cells in y.
Definition at line 74 of file solution.hpp.

SCALAR* Solution::qex [protected]

Array for the flow discharge.
Definition at line 96 of file solution.hpp.

SCALAR Solution::T [protected]

Final time.
Definition at line 77 of file solution.hpp.

SCALAR* Solution::uex [protected]

Array for the flow velocity.
Definition at line 94 of file solution.hpp.

SCALAR* Solution::xex [protected]

Array for the first coordinate.
Definition at line 88 of file solution.hpp.

SCALAR* Solution::yex [protected]

Array for the second coordinate.
Definition at line 90 of file solution.hpp.

SCALAR* Solution::zex [protected]

Array for the topography.
Definition at line 98 of file solution.hpp.

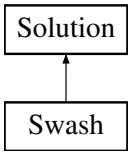
5.15 Swash Class Reference

`#include <swash.hpp>`
Inheritance diagram for Swash:



Public Member Functions

- Swash (Parameters &)

  Constructor.
- virtual ∼Swash ()

  Destructor.
- void compute ()

  Computes the solution.
- void ua_eta (SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR ∗, int)

  Computes the non-dimensional speed ua and the non-dimensional free surface eta.
- void param (SCALAR, SCALAR, SCALAR, SCALAR) const

  Writes the parameters of the solution.
- void leftcondition (int, SCALAR, SCALAR) const

  Writes the left boundary condition (at each dt = 0.01s)
- SCALAR J (int, SCALAR)

  Computes the kth Bessel function for k=0,1 or 2.

Additional Inherited Members

5.15.1 Detailed Description

Definition at line 69 of file swash.hpp.

5.15.2 Constructor & Destructor Documentation

Swash::Swash (Parameters & *par*)

Constructor.

Defines the physical parameters and prints the header with the configuration.

Parameters

in	*par*	contains all the values from the parameters

Modifies

Solution::dx_ex, Solution::L, Solution::xex, Solution::zex to have the inclined plane configuration.

Definition at line 58 of file swash.cpp.

Swash::∼Swash ( ) [virtual]

Destructor.

Definition at line 138 of file swash.cpp.

5.15.3 Member Function Documentation

void Swash::compute ( ) [virtual]

Computes the solution.

Computes the swash solutions of a wave on an inclined plane, see Marche [2005], Carrier and Greenspan [1958].

Implements Solution.

Definition at line 142 of file swash.cpp.

SCALAR Swash::J (int *k,* SCALAR *x*)

Computes the kth Bessel function for k=0,1 or 2.

Computes the value of the kth Bessel function (k=0,1 or 2) at x.

Parameters

in	*k*	the number of the Bessel function (k=0,1 or 2)
in	*x*	the point to evaluate the Bessel function

Definition at line 327 of file swash.cpp.

void Swash::leftcondition (int *n*, SCALAR *hexl*, SCALAR *uexl*) const

Writes the left boundary condition (at each dt = 0.01s)

Saves the left boundary condition (h and q=hu) in the file transient_leftbc.txt or periodic_leftbc.txt.

Parameters

in	*n*	current time iteration
in	*hexl*	left value of the water height
in	*uexl*	left value of the velocity

Definition at line 300 of file swash.cpp.

void Swash::param (SCALAR *L*, SCALAR *dx_ex*, SCALAR *alpha*, SCALAR *e*) const

Writes the parameters of the solution.

Parameters

in	*L*	length of the domain
in	*dx_ex*	space step
in	*alpha*	the slope of the plane
in	*e*	the initial curvature of the wave

Definition at line 276 of file swash.cpp.

void Swash::ua_eta (SCALAR *x0*, SCALAR *e*, SCALAR *a*, SCALAR *ta*, SCALAR *xa*, SCALAR * *result*, int *sol*)

Computes the non-dimensional speed ua and the non-dimensional free surface eta.

Computes the velocity and free surface (using Newton algorithm) at one point and one time.

Parameters

in	*x0*	abscissa changement
in	*e*	the initial curvature of the wave
in	*a*	the parameter a in the references
in	*ta*	non dimentional time
in	*xa*	non dimentional abscissa
in	*result*	non-dimensional velocity and free surface at (xa,ta)
in	*sol*	to choose the transient (sol=1) or periodic (sol=2) solution to compute

Definition at line 179 of file swash.cpp.

The documentation for this class was generated from the following files:

- Headers/swash.hpp
- Sources/swash.cpp

5.16 Swash_solution Class Reference

Computes the solutions of the swash over an inclined plane.

`#include <swash.hpp>`

5.16.1 Detailed Description

Computes the solutions of the swash over an inclined plane.

Class that computes the solutions of the swash over an inclined plane, see Marche [2005], Carrier and Greenspan [1958].

The documentation for this class was generated from the following file:

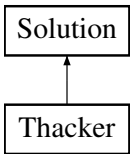
- Headers/swash.hpp

5.17 Thacker Class Reference

Computes Thacker solution.

`#include <thacker.hpp>`

Inheritance diagram for Thacker:



Public Member Functions

- Thacker (Parameters &)

  Constructor.
- virtual ~Thacker ()

  Destructor.
- void compute ()

  Computes the solution.
- void param (SCALAR, SCALAR, SCALAR, SCALAR, SCALAR) const

  Writes the parameters of the solution.

Additional Inherited Members

5.17.1 Detailed Description

Computes Thacker solution.

Class that computes the solution for Thacker parabola, see Thacker [1981].

Definition at line 69 of file thacker.hpp.

5.17.2 Constructor & Destructor Documentation

Thacker::Thacker (Parameters & *par*)

Constructor.

Defines the physical parameters, the final time and prints the header with the configuration.

Parameters

`in`	*par*	contains all the values from the parameters

Modifies

Solution::dx_ex, Solution::L, Solution::T, Solution::xex, Solution::zex to have Thacker configuration.

Definition at line 58 of file thacker.cpp.

Thacker::~Thacker ( ) [virtual]

Destructor.
Definition at line 88 of file thacker.cpp.

5.17.3 Member Function Documentation

void Thacker::compute ( ) [virtual]

Computes the solution.
Computes Thacker solution, see Thacker [1981].
Modifies

Solution::hex, Solution::uex.

Implements Solution.
Definition at line 93 of file thacker.cpp.

void Thacker::param (SCALAR *L*, SCALAR *h0*, SCALAR *a*, SCALAR *dx_ex*, SCALAR *T*) const

Writes the parameters of the solution.
Parameters

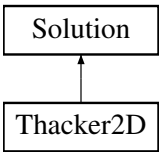
in	*L*	length of the domain
in	*h0*	value of the topography in the center of the domain
in	*a*	parameter of the topography
in	*dx_ex*	space step
in	*T*	final time

Definition at line 122 of file thacker.cpp.
The documentation for this class was generated from the following files:

- Headers/thacker.hpp
- Sources/thacker.cpp

5.18 Thacker2D Class Reference

Computes Thacker solutions in 2D.
`#include <thacker2d.hpp>`
Inheritance diagram for Thacker2D:



Public Member Functions

- Thacker2D (Parameters &)
  Constructor.
- virtual ~Thacker2D ()
  Destructor.
- void compute ()
  Computes the solution.
- void param (SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR, SCALAR) const
  Writes the parameters of the solution.

Additional Inherited Members

5.18.1 Detailed Description

Computes Thacker solutions in 2D.

Class that computes the solutions for Thacker paraboloid, see Thacker [1981].

Definition at line 69 of file thacker2d.hpp.

5.18.2 Constructor & Destructor Documentation

Thacker2D::Thacker2D (Parameters & *par*)

Constructor.

Defines the physical parameters, the final time and prints the header with the configuration.

Parameters

in	*par*	contains all the values from the parameters

Modifies

Solution::dx_ex, Solution::L, Solution::l, Solution::T, Solution::xex, Solution::yex, Thacker2D::zex2D to have Thacker 2D configuration.

Definition at line 58 of file thacker2d.cpp.

Thacker2D::~Thacker2D ( ) [virtual]

Destructor.

Definition at line 131 of file thacker2d.cpp.

5.18.3 Member Function Documentation

void Thacker2D::compute ( ) [virtual]

Computes the solution.

Computes the chosen Thacker 2D solution, see Thacker [1981].

Modifies

Thacker2D::hex2D, Thacker2D::uex2D, Thacker2D::vex2D.

Implements Solution.

Definition at line 147 of file thacker2d.cpp.

void Thacker2D::param (SCALAR *L*, SCALAR *l*, SCALAR *h0*, SCALAR *a*, SCALAR *dx_ex*, SCALAR *dy_ex*, SCALAR *T*) const

Writes the parameters of the solution.

Parameters

in	*L*	length of the domain in x
in	*l*	length of the domain in y
in	*h0*	value of the topography in the center of the domain
in	*a*	parameter of the topography

in	*dx_ex*	space step in x
in	*dy_ex*	space step in y
in	*T*	final time

Definition at line 184 of file thacker2d.cpp.
The documentation for this class was generated from the following files:

- Headers/thacker2d.hpp
- Sources/thacker2d.cpp

Chapter 6

File Documentation

6.1 Headers/bedload.hpp File Reference

Computes solutions with bedload.

```
#include "solution.hpp"
```

Classes

- class Bedload

  Computes solutions with bedload.

Macros

- #define BEDLOAD_HPP

6.1.1 Detailed Description

Computes solutions with bedload.

Author

Minh Hoang Le lemhoang@math.cnrs.fr (2012)
Carine Lucas carine.lucas@univ-orleans.fr (2012-2015)

Version

1.03.00

Date

2015-10-28

Analytic solution: the bed is moving with bedload, see Berthon et al. [2012].
