

How to take part to Diamanlab project

This project is hosted on <https://sourcesup.renater.fr/projects/diamanlab/>.

1. Install and configure Git on your computer:

1. Download and install from <https://git-scm.com/>
2. Configure it by following <https://git-scm.com/book/en/v2/Getting-Started-First-Time-Git-Setup>

2. Create an account on SourceSup:

1. Go to <https://sourcesup.renater.fr/>
2. Click on the top right frame "Login with" and follow the steps.

3. To be able to access the Git remote repository, **indicate your SSH key** (create it before if you don't have any: [see here](#)):

1. Go to your account page <https://sourcesup.renater.fr/account/>
2. Bottom frame "Informations relatives au compte shell", click on "Éditer les clefs" link and add your key.
3. Send a mail to [Emmanuelle Sarrouy](#) to be added to the project with proper rights.
4. You may have to wait until the registered sshkey is active (it may take an hour).

4. Get a local copy of the diamanlab project:

1. Select a folder on your computer where you want to put the copy of the diamanlab project.
2. Launch Git bash if you use Windows or simply a terminal in this folder and execute

```
git clone -b development  
git+ssh://git@git.renater.fr:2222/diamanlab.git
```

Now you are almost ready to work on Diamanlab code... Before doing so, **please read the [branching policy](#)** ⚠
